CONTRACTOR

To whom it may concern,

I am writing this letter on behalf of South Carolina Lightning Protection. EMCS Subcontracted to South Carolina Lightning protection to install a new lightning protection system at Bldg. 129 on Joint Base Charleston Air Base. South Carolina Lightning Protection was an outstanding firm to work with on this project. The work they performed included a new underground ground ring around the perimeter of the Bldg. there was many existing utilities that had to be crossed. They dug with extreme caution and none of the utilities were damaged. They also had concrete and asphalt to remove and replace, this was also done and completed without problem. SC Lightning Protection put new lightning protection on the roof of Bldg. 129 as well as up the Communication Tower that was Approx. 100' high. SC Lightning Protection worked safely and timely to ensure that the work was completed on time and in a very safe manner. I would recommend South Carolina Lightning Protection to anyone. They are a very professional and great to work with.

Thank You
